PROFILE

Motivated and passionate **CIO, WEB PROJECTS LEAD AND DEVELOPER** with over 10 years of real-life experience with numerous successful launches of production projects. Hands-on experience in the various fields associated with web development, from system administration to projects bootstrapping and technology management and communications.

Interested in **challenging and rewarding positions** with innovative and forward-looking companies to support with substantial knowledge and abilities and to effectively grow and develop with.

SKILLS

Web Project Management	over 5 years of experience in leading lean agile and distributed teams towards successful product launches on time and on budget
Web Development	10 years of hands-on experience building all kinds of web projects and applications
System Administration	strong core skills in Linux system administration tailored towards building web stacks, with the proven ability of building and maintaining web servers and stacks to support the needs of a product and the team
Effective Communications	proven track record in acting as the point of contact at the company for all technological partners and business stakeholders, ensuring effective and precise information delivery and management

ACHIEVEMENTS

- Built and released a number of successful web projects, delivered on time and on budget, managing all sides of the projects - from the prototyping and coding to building hardware/software stacks for production deployment.

- As the technological point of contact at the company, communicated with numerous external business and development partners, ensuring clear and concise delivery of information to all stakeholders, and rapid resolution of all bottlenecks to provide for unrestricted continuous development.

- Supported other departments within the company with the necessary technological knowledge, provided them with any tools or data insights they needed to efficiently perform their tasks and ensuring that they have at hands the proper tools for their job, tailored towards specific needs.

- Led the company through extensive infrastructure and backend changes, planning and executing the development in a manner ensuring seamless customers' experience during the changes and strong growth of sales as the result.

CORE TECHNOLOGIES

- **Ruby on Rails** - expert level, over 5 years of experience developing commercial projects

- **PHP** - expert level, over 10 years of experience developing commercial and community projects

- **Linux** - advanced level, over 11 years of system administration, started in highly heterogenous environments and tailored towards the needs of web applications and stacks

- **MySQL** - advanced level, over 10 years of using the database for commercial and community projects of various sizes and needs.

- **Production deployment** - advanced level, over 7 years of building production web stacks and deploying applications, lately - with custom Ruby on Rails + Capistrano + Monit based solutions.

EDUCATION

Altay State University, Russia - Master of Science Degree with honors in Radiophysics, with specialization in Information Systems and Technologies.

CERTIFICATIONS

Zend Certified Engineer (ZCE) - #ZEND003962, obtained in August, 2006

EXPERIENCE

Lead Developer at JN Solutions — 2011-2012, CTO at JN Solutions — 2012-PRESENT
- Was invited to join the company from overseas, and since then involved in a development of complex CRM application in extremely domain knowledge heavy industry of Australian employment services. Leading the expansion of the company with its CRM product into other niches and industries.

CIO and Technology Lead at RSP Entertainment N.V. — 2007-2011
- Joined the company as technology manager after working as an offsite consultant, successfully leading it through a number of significant changes in it's products and offerings and making sure that any major internal technological changes do not affect customers' experience and positive sales growth.

- Started as a single developer on staff, and grew with the company towards the team leader and hands-on CIO position, successfully assisting all other departments with in-depth technological knowledge and providing them with tools and insights needed to successfully perform their jobs.

- Being the main point of contact on all technological issues between the company and it's partners and customers, ensured clear and efficient communications to provide for unrestricted and rapid products development together with any involved third parties and customers.

- Evolved company's online infrastructure, both hardware and software, by identifying and resolving existing sources of problems, and making sure the team is able to effective use the best tools available for the tasks at hand and the resources are tailored towards the current needs of the company.

Technology Lead and Primary Developer at AeroStatus Corporation — 2007-PRESENT
- Built the initial version of the information service and successfully led it through a number of revised editions, resulting in the current successful and popular product that spans dozens of airports and airlines, providing realtime flight information for the passengers and any related parties.

- Demonstrated strong communication and issue management skills negotiating data retrieval procedures with third parties (airports and airlines) using different back-end system, providing necessary middle ground to successfully integrate all of them into the service

Web and Infrastructure Consultant at EverEZ Systems — 2006-PRESENT
- Provided hands-on technological support for evolving online environment of the innovative software product (EverDesk), ensuring seamless customer experience during numerous changes in the underlying technology, and support core software's team with web and backend tools.

IT Director at Dugtrio, Ltd — 2004-2007
- Successfully built and delivered the platform for mobile-oriented sms-based information and entertainment services, putting the company at the forefront of such industry in Cyprus.

- Managed and oversaw all IT operations of the company, including software developments and IT-related communications with business partners.

Technology and Community Leader at AnimeReactor.ru — 2005-2009
- Joined the community as a regular member at the early stages of it's growth, and helped it evolve and shape into effective operations involving thousands of active members and hundreds of contributors.

- Designed and bootstrapped a number of teams and processes, including Quality Assurance review procedures, led the teams initially to battle-proof the procedures and to establish and coach successive leadership.

- Stood up as the community leader during the change of leadership, resolving all ongoing disputed and conflicts and ensuring the survival of the community, and later identifying and establishing successive leadership.

System Administration Team Leader at Altay State University — 1998-2002
- Managed and developed the network and systems at the Physics Department of Altay State University, demonstrating the ability to adapt and learn in quickly evolving educational environment.
